Simple Dock

Information

This is a simple, easy to style Dock, that requires very little system resources.
The Dock won't store running programs. It supports drag and drop.
The program isn't foolproof so unintended behavior can be expected.
The program was written in C# 2019 Community edition with .Net Framework 4.5 target platform.
Made by: Kurtis

System requirements

At least .Net Framework 4.5 is required to run this program.
The system requirement mostly depends on the style settings.

Minimal requirements

10-20 MB free memory
1.0 GHz processor

Install

Extract these files into a folder:
- sm_dock.exe
- sm_dock_cfg.exe

Uninstall

Delete these files or the folder where you extracted them:
- icons.img
- sm_dock.exe
- sm_dock_cfg.exe
- sm_dock.ini

Usage

Before anything you must configure the Dock with the **sm_dock_cfg.exe** file, because the required files are missing:
- icons.img
- sm_dock.ini

Simple Dock configuration – sm_dock_cfg.exe

New	Empty the text fields
Add	Add the filled data to the list
Delete	Delete the selected item from the list
Update	Overwrite the selected item from the list
Up/Down	Move the item up and down in the list

After you have finished with the settings press the **Save Config** button, if there are no errors then press the **Generate cache** button – the next time you will need to use this button when you add or update the list. After that if everything completed without errors you can start the **sm_dock.exe** file.

Simple dock – sm_dock.exe

If you don't like what you have set, close it with ALT+F4, then with the configurator fine-tune your settings until you are satisfied.
